

Kai Flex™

Kai Flex supports the Sport Kote® System and offers excellent results from precise flow control, smooth application and microfiber pad technology. And...it saves you time and money!

Features and Benefits

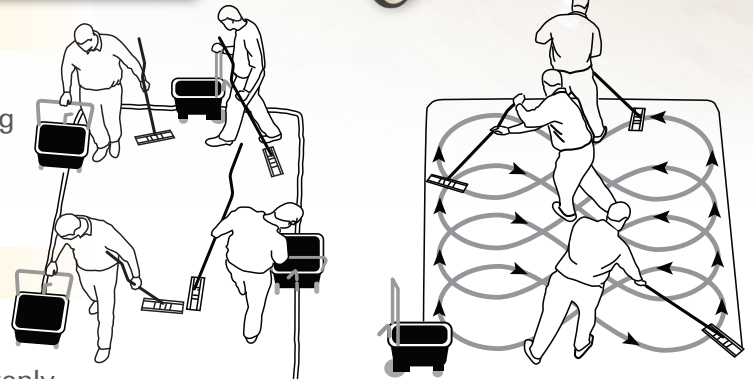

Precise Flow Control

Control exactly how much solution goes onto the floor by using the flow control spigot.

Smooth Application

Release finish in a U-shaped pattern onto the floor and fill in the work area with our revolutionary microfiber finishing pad and double-bend ergonomic handle. The result is a level, smooth coat with no bubbles or streaks

Microfiber Pad Technology

Kai Flex comes with one microfiber blue finishing pad.

The finishing pad is specially designed to spread finish evenly and quickly – leaving no streaks or bubbles. It is easy-to-use and can be washed and reused up to 300 times.

Kai Flex saves you time and money...

Reduced Cost

- **No Waste** - because the finish pads never touch the solution tank, unused finish can be returned to the original container.
- **Reduced Chemical Consumption** - with precise flow control, floor finishes and cleaners are never overused or misused.
- **Time Savings** - the Kai Flex finishes floors twice as fast as the traditional mop and bucket method. Using the Kai Flex to daily clean floors triples your labor savings over a standard 36" dust mop and 24 ounce wet mop.
- **Reduced Mop Consumption** - microfiber pads can be used and laundered 300 times before replacement. Mops are often used for a couple of weeks before they become overloaded with soil and need replacement.
- **Reduced Down Time** - the large 10-gallon solution tank capacity means fewer trips to the storeroom.
- **Reduced Employee Fatigue** - the ergonomic handle and smooth-moving microfiber pad reduces fatigue and increases productivity.
